God created man, like all living things on earth, from the water and soil of this earth. With the difference that God respired his soul into human beings and gave human beings both consciousness and power and made human beings the noblest of creatures.

The longer human beings have been on Earth, the more experienced and advanced humans have become and the more discoveries they have made.

With the help of their own experience and the knowledge of the prophets, who were God's special messengers to guide humanity, they achieved more complete and comprehensive sciences, secrets and knowledge every day. One of these important sciences is nutrition. Knowledge of what, how much and how it should be used as food to be both healthy and nutritious and hygienic and clean and free of any pollution.

For example, after the discovery of fire, humans gradually learned to cook some of their foods, as this would kill the germs in the food, as well as make the food tastier.

Cooking meat and boiling water and then inventing various foods and drinks. Iranians were the first to heat water and add some herbs such as *rosa damascena* to boiling water thousands of years ago, using distillation to make delicious drinks and various herbal and natural remedies.

These drinks, which are rose water, mint extract and other medicinal plants, are useful in treating and improving many diseases and strengthening the organs and the immune system, as well as the human psyche (nerves). In the last century, along with the significant progress of science and the updating of information and facilities, many different plants that have medicinal, therapeutic and tonic properties have been identified and used.

The extract of these plants is obtained by using industrial essential oil systems and is used in the manufacture of natural and herbal medicines, in the food industry, cosmetics, perfumes and fragrances.

Today, machinery lifestyle and the avoidance of natural nature (mentioned at the beginning) and unhealthy fast foods and chemical drugs that cause the destruction of human organs, more than ever before, human beings need to use Healthy foods and natural and non-chemical treatments.

Iran is one of the countries of Southwest Asia (Middle East) with Afghanistan and Pakistan in the east, Turkmenistan in the northeast, Caspian Sea in the north, Azerbaijan and Armenia and Turkey in the northwest, Iraq in the west and finally It is bordered to the south by the waters of the Persian Gulf and the Sea of Oman.

The Islamic Republic of Iran due to its large population, political stability, potential economic resources and most importantly having the largest coast of the Persian Gulf and dominating the strategic Strait of Hormuz as well as its connection to Central Asia and the Caspian Sea, as a bridge between Asia, Europe Africa is of great geopolitical importance and can take steps to increase trade. Therefore, with more than two thousand kilometers of coastline from the Arvand River to the port of Goatre, in addition to dominating the waterways leading to the Indian Ocean, it is the only country that can transport various export products by land to many parts of the world.

Due to the geographical and regional location of Iran and low production costs such as energy, fuel and labor costs and the increasing trend of establishing production centers in Iran in various fields, It can be said that this country has the potential to export all produced goods in the region. Iran's foreign trade statistics in recent years show that despite the increase in the share of Iran's neighbors in exports, a large capacity in the vicinity of Iran still remains unused. Statistics show that 54% of Iran's exports in 2018 are related to neighboring countries. Therefore, with proper marketing, it is possible to export various products from Iran to other countries.

Also, Iran's non-oil exports in 2018 amounted to \$ 45,000 million. In the meantime, the export of rose water and herbal essences has also had a good rank.

Regarding products such as rose water, Iran has a lot to say, and in the global market, Iranian rose water is known as the highest quality.

With thousands of traditional and semi-industrial rose water-making workshops and rose water-making factories in all parts of Iran, especially Kashan and Shiraz, Iran is one of the best exporters of this product.

Keep in mind that Iran has been a member of free trade with Eurasia since October 27, 2019, and Eurasia is Iran's new partner. This is an important advantage for Iran because these countries are consumerist countries and Iran, as a producing country, can easily export its goods to these countries.

Central Asian countries, India, Pakistan and Afghanistan are also consumerist countries and, most importantly, like Iranian goods.

In the meantime, we can mention Iran's good and friendly relations with the CIS countries, which will cause economic prosperity in all countries.

There are also some countries, such as Ukraine and other Eastern European countries, for which buying Iranian goods is not very expensive. In addition, the quality of Iranian goods has been approved by many countries in the region and the world.

Iran's convenient geographical location increases the speed of goods transfer and communication, and this speed and time saving in trade is very valuable. Iran is in the middle of the world. Compared to European countries, we can deliver goods in the fastest time. Central Asian countries can also easily receive our export goods. This is while a country like China does not have our position, but it has made excellent use of its existing capacities.

Armaghane Tabiat Group is active in the field of production and presentation of pure rose water, bud and flower of Mohammadi, herbal essences and concentrated herbal syrups, essential oils of medicinal plants and natural herbal medicines, healthy, tonic and hygienic, with the aim of promoting and encouraging everyone to use natural and sometimes completely organic products and intends to play its role by using Iran's potential and producing Iranian quality products and introducing more and more and exporting rose water and distillates to neighboring countries and other parts of the world.
